

OFFICE OF PERSONNEL MANAGEMENT

Report on Summer 1994 Surveys Used To Determine Cost-of-Living Allowances in Selected Nonforeign Areas

AGENCY: Office of Personnel
Management.

ACTION: Notice.

SUMMARY: This notice publishes the "Report to OPM on Living Costs in Hawaii, Guam and the Commonwealth of the Northern Mariana Islands, Puerto Rico, United States Virgin Islands, and in the Washington, DC, Area, August 25, 1995," prepared by Jack Faucett Associates under Government contract OPM-94-BP-3816.

DATES: Comments must be received on or before January 29, 1996.

ADDRESSES: Send or deliver comments to Allan G. Hearne, Salary Systems Division, Office of Compensation Policy, Human Resources Systems Service, Office of Personnel Management, Room 6H31, 1900 E Street NW., Washington, DC 20415, or FAX to (202) 606-4264.

FOR FURTHER INFORMATION CONTACT:
Allan G. Hearne, (202) 606-2838.

SUPPLEMENTARY INFORMATION: Sections 591.205(d) and 591.206(c) of title 5, Code of Federal Regulations, require that nonforeign area cost-of-living allowance (COLA) survey summaries and calculations be published in the Federal Register. Accordingly, OPM is publishing the complete "Report to OPM on Living Costs in Hawaii, Guam and the Commonwealth of the Northern Mariana Islands, Puerto Rico, United States Virgin Islands, and in the Washington, DC, Area, August 25, 1995," produced by Jack Faucett Associates under contract with OPM. This report explains in detail the methodologies, calculations, and findings of the summer 1994 living-cost surveys.

Survey Results. Jack Faucett Associates computed index values of relative living costs in the allowance areas using an index scale where the living costs in the Washington, DC, area equal 100. (See the Executive Summary of the report.) OPM notes that the summer survey indices showed that the COLA rates for all of the allowance areas are above levels warranted by the indices. However, the Treasury, Postal Service and General Government Appropriations Act, 1992 (Pub. L. 102-141), as amended, prohibits reductions in COLA rates through December 31, 1996. Therefore, OPM is *not* proposing

any adjustments in the COLA rates in these allowance areas at this time.

Office of Personnel Management.

James B. King,

Director.

Report to OPM on Living Costs in Hawaii, Guam and the Commonwealth of the Northern Mariana Islands, Puerto Rico, United States Virgin Islands, and in the Washington, DC, Area

August 1995.

Table of Contents

Executive Summary

1. Introduction

- 1.1 Report Objectives
- 1.2 Changes in This Year's Survey
 - 1.2.1 Three-Year CES Moving Average
 - 1.2.2 New Living Communities
 - 1.2.3 Historical Housing Data
- 1.3 Pricing Period

2. The COLA Model

- 2.1 Measurement of Living-Cost Differences
- 2.2 Step 1: Identifying the Target Population
 - 2.2.1 Federal Salaries
 - 2.2.2 Federal Employment Weights
- 2.3 Step 2: Estimating How People Spend Their Money
 - 2.3.1 Consumer Expenditure Survey (CES)
 - 2.3.2 Expenditure Categories and Components
- 2.4 Step 3: Selecting Items and Outlets
 - 2.4.1 Item Selections—The Marketbasket
 - 2.4.2 Geographic Coverage and Outlet Selection
 - 2.4.2.1 Geographic Areas
 - 2.4.2.2 Similarity of Outlets
 - 2.4.2.3 Catalog Pricing
- 2.5 Step 4: Surveying Prices
 - 2.5.1 In-House Research Staff
 - 2.5.2 Field Researchers "Research Associates"
 - 2.5.3 Data Collection Materials
 - 2.5.4 Inclusion of Sales and Excise Taxes
 - 2.5.5 JFA's Onsite Visits
 - 2.5.6 Special Considerations in Selected Areas
 - 2.5.6.1 Pricing Surveys in Hawaii County, Puerto Rico, and the Virgin Islands
 - 2.5.6.2 Surveying the Washington, D.C., Area

2.6 Step 5: Analyzing Data and Computing Indexes

- 2.6.1 General Formulae
 - 2.6.1.1 Indexes
 - 2.6.1.2 Item Weights
 - 2.6.1.3 Category and Component Weights
- 2.6.2 Computing the Overall Index

3. Consumption Goods and Services

- 3.1 Categories and Category Weights
- 3.2 Goods and Services Data Collection—Special Considerations
 - 3.2.1 Exchange and Commissary Expenditure Research
 - 3.2.2 Restaurant Pricing
- 3.3 Goods and Services Survey Results

4. Housing

- 4.1 Component Overview
- 4.2 Housing Model

- 4.2.1 Expenditure Research
- 4.2.2 Housing Profiles
- 4.2.3 Living Community Selection
- 4.2.4 Housing-Related Expenses
 - 4.2.4.1 Utilities
 - 4.2.4.2 Real Estate Taxes
 - 4.2.4.3 Owners/Renters Insurance
 - 4.2.4.4 Home Maintenance
 - 4.2.4.5 Telephone
- 4.3 Housing Data Collection Procedures
 - 4.3.1 Homeowner Data Collection
 - 4.3.2 Renter Data Collection
- 4.4 Housing Analysis
 - 4.4.1 Homeowner Data Analysis
 - 4.4.2 Rental Data Analysis
- 4.5 Housing Survey Results
- 5. Transportation
 - 5.1 Component Overview
 - 5.2 Private Transportation Methodology
 - 5.2.1 Vehicle Selection and Pricing
 - 5.2.2 Vehicle Trade Cycle
 - 5.2.3 Fuel Performance and Type
 - 5.2.3.1 Impact of Temperature Upon Fuel Performance
 - 5.2.3.2 Impact of Road Surface Upon Fuel Performance
 - 5.2.3.3 Impact of Gradient Upon Fuel Performance
 - 5.2.3.4 Overall Impact Upon Fuel Performance
 - 5.2.4 Vehicle Maintenance
 - 5.2.5 Tires
 - 5.2.6 License and Registration Fees, and Miscellaneous Tax
 - 5.2.7 Depreciation
 - 5.2.8 Finance Expense
 - 5.2.9 Vehicle Insurance
 - 5.2.10 Overall Annual Costs
- 5.3 Other Transportation Costs—Air Fares
- 5.4 Transportation Component Analyses
- 6. Miscellaneous Expenses
 - 6.1 Component Overview
 - 6.2 Component Weights
 - 6.3 Component Categories
 - 6.3.1 Medical Expense Category
 - 6.3.2 Contributions Category
 - 6.3.3 Personal Insurance and Retirement Category
 - 6.4 Miscellaneous Expense Analyses
- 7. Final Results
 - 7.1 Total Comparative Cost Indexes

List of Appendices

- Appendix 1: Publication in the Federal Register of Results of Nonforeign Area Living-Cost Surveys: 1990-1994
- Appendix 2: Federal Employment Weights
- Appendix 3: Consumer Expenditure Surveys (CES) Item Weights
- Appendix 4: CES Category and Component Weights
- Appendix 5: Item Descriptions
- Appendix 6: Pricing Changes
- Appendix 7: OMB-Approved Survey Materials
- Appendix 8: Consumption Goods and Services Analysis
- Appendix 9: OPM Living Community List
- Appendix 10: Historical Home Market Values and Interest Rates
- Appendix 11: Historical Housing Data
- Appendix 12: Rental Data Analyses
- Appendix 13: Housing Cost Analysis
- Appendix 14: Housing Analysis
- Appendix 15: Private Transportation Cost Analysis

Appendix 16: Auto Insurance Calculation Worksheet

Appendix 17: Air Fares and Other Transportation Expenses Cost Analysis

Appendix 18: Transportation Analysis

Appendix 19: Miscellaneous Expense Analysis

Appendix 20: Final Indexes

Executive Summary

This report provides the results of the summer 1994 living-cost surveys and compares living costs in certain Pacific and Caribbean nonforeign cost-of-living allowance (COLA) areas relative to the Washington, DC, area.

The surveys and analyses were conducted by Jack Faucett Associates (JFA), an economics consulting firm located in Bethesda, Maryland, and its subcontractor, Runzheimer International, a Wisconsin-based firm specializing in the collection and analysis of cost-of-living information. The study was conducted for the Office of Personnel Management (OPM) under contract OPM-94-BP-3816. The contract requires JFA to:

(1) Survey living costs in seven allowance areas and in the Washington, DC, area, and

(2) Compare living costs between the allowance areas and the DC area.

For this study, JFA and Runzheimer researched more than 3,000 outlets and gathered more than 12,000 prices on more than 200 items representing typical consumer purchases. These prices were then combined using consumer expenditure information developed by the Bureau of Labor Statistics. The final results of the study are a series of living-cost indexes, shown in the table below, which show the living-costs in each of the allowance areas relative to the Washington, D.C., area. The index for the DC area (not shown) is 100.00 because it is, by definition, the reference area.

TABLE E-1.—FINAL COST COMPARISON INDEXES

Allowance area	Index
City and County of Honolulu, Hawaii	119.56
Hawaii County, Hawaii	112.56
Kauai County, Hawaii	116.35
Maui County, Hawaii	118.84
Guam/CNMI, Local Retail	119.39
Guam/CNMI, Commissary/Exchange	113.40
Puerto Rico	99.63
U.S. Virgin Islands	112.08

CNMI = Commonwealth of the Northern Mariana Islands

OPM implemented a number of improvements for the summer 1994 survey. These included:

- Using a moving average to introduce new weights based on the results of the Bureau of Labor Statistics Consumer Expenditure Surveys;
- Using new representative income levels based on the 1994 distribution of salaries of Federal employees in the allowance areas;
- Selecting new living communities based on the results of the 1992 Federal Employee Housing and Living Patterns Survey;
- Incorporating historical housing data to reflect both newly purchased and previously purchased homes;
- Using the median home value in place of trimming and trend analyses used in previous surveys; and
- Using the Goods and Services index to reflect relative expenditures for cash contributions.

These changes as well as the data collection and analysis procedures already employed in the survey are discussed in the various sections of this report.

1. Introduction

1.1 Report Objectives

This comprehensive report culminates data collection and research work undertaken in summer 1994 as required by Tasks 1 and 2 of contract OPM-94-BP-3816 between the Office of Personnel Management (OPM) and Jack Faucett Associates (JFA). This report only provides the results of the summer 1994 surveys. A listing of earlier reports that provided the results of previous surveys is shown in Appendix 1.

The analyses show the comparative living-cost differences between the Washington, DC, area and the following allowance areas:

1. City and County of Honolulu, Hawaii
2. Hawaii County, Hawaii
3. Kauai County, Hawaii
4. Maui County, Hawaii
5. Guam and the Commonwealth of the Northern Mariana Islands (CNMI)
6. Puerto Rico
7. U.S. Virgin Islands

By law, Washington, DC, is the base or "reference" area for the nonforeign area cost-of-living allowance (COLA) program.

The contract also required JFA to analyze living-costs of Federal civilian employees in Guam who have access to military commissaries and exchanges. Under OPM regulations, employees who have unlimited access to commissaries and exchanges because of their Federal civilian employment are paid a COLA rate that takes into consideration such purchasing privileges. These regulations do not apply to Federal employees who have limited access to commissaries and

exchanges or who have access for other reasons, e.g., military dependents or retired military personnel.

1.2 Changes in This Year's Survey

One of the obvious changes this year was OPM's selection of a new contractor for living-cost surveys and analyses: JFA. JFA subcontracted a substantial portion of the work to Runzheimer International, OPM's previous contractor for the COLA program.

OPM directed JFA to make several changes to the survey and analyses. Some of the key changes this year included:

- Using a moving average to introduce new weights based on the results of the Bureau of Labor Statistics Consumer Expenditure Surveys (CES);
- Using new representative incomes based on the 1994 distribution of salaries of Federal employees in the allowance areas;
- Selecting new living communities based on the results of the 1992 Federal Employee Housing and Living Patterns Survey;
- Incorporating historical housing data to reflect both newly purchased and previously purchased units;
- Using the median home value in place of trimming and trend analyses used in previous surveys; and
- Using the Goods and Services index to reflect relative expenditures for cash contributions.

Three of these changes are discussed further below. The other changes are discussed where applicable in the report.

1.2.1 Three-Year CES Moving Average

One change was the introduction of a three-year moving average of CES data in calculating the weights used to combine price indexes. In prior years, expenditure weights were based on the 1988 CES, and OPM wanted to use more current CES information.

Rather than simply replacing the 1988 CES data with the most recent (1992) CES data, OPM implemented a system that would allow the gradual introduction of new CES data over time, thereby reducing the impact that short-term changes in CES might have on the living-cost indexes. In future surveys, OPM plans to include current CES information and drop the oldest CES data to maintain a three-year moving average. Appendices 3 and 4 show the CES data used in this study.

1.2.2 New Living Communities

Another change was the selection of new living communities based on the results of the 1992 Federal Employee Housing and Living Patterns Survey. In

that survey, employees were asked to provide their residential zip codes. OPM used this information to refine community selection.

Two types of changes were made. In areas with relatively large concentrations of Federal employees and sufficient housing data, OPM selected communities to reflect the areas where Federal employees typically lived. On Oahu, for example, these changes generally resulted in the selection of communities within or close to Honolulu proper. In other areas where concentrations of Federal employees were not as evident or where obtaining a sufficient quantity of housing data had been difficult in previous surveys, OPM expanded the survey community to cover a larger area. For example, the entire island was surveyed for housing in Guam, Kauai, Maui, St. Croix, and St. Thomas.

The updated list of communities is provided in Appendix 9. These are the communities in which house sales and rental rates were collected. The communities were also used to determine the normal shopping radius and the outlets at which prices were collected.

1.2.3 Historical Housing Data

A third change was the incorporation of historical housing data to reflect not only the prices paid for recent home purchases but also for homes purchased in prior years. Appendix 10 shows the home market values, interest rates, and annual principal and interest payments for each area by year and income level. Appendix 11 shows how the principal and interest payments were combined using weights based on the percent of Federal employees presumed to have purchased their homes in each given year. The weights were derived from the results of the 1992 Federal Employee Housing and Living Patterns Survey.

1.3 Pricing Period

The prices were collected in the allowance areas and in the Washington, D.C., area in August 1994. As with the previous surveys, the prices of some items—those dependent upon the pricing of other items—were collected slightly later (i.e., in September and October 1994). In addition, individual item prices not meeting OPM's quality control procedures were resurveyed in October and used to verify or replace the original prices.

As was done in previous surveys, JFA included some catalog sales in its survey. Only catalogs that sell merchandise in both the allowance areas and the Washington, D.C. area were used. To ensure consistent

seasonal catalog pricing, JFA used spring/summer catalogs for the catalog items surveyed.

2. The COLA Model

2.1 Measurement of Living-Cost Differences

A common and widely accepted way to measure living-cost differences between and among locations is to select representative items that people purchase in these locations and to calculate the respective cost differences, combining them according to their importance to one another (as measured by relative percentage of expenditures). The COLA model applies this methodology to compare the living costs in each of the allowance areas with the living costs in the Washington, DC, area.

Moving from this basic concept to computing comparative living costs between each allowance area and the Washington, DC, area involves five main steps:

Step 1: Identify the segment of the population for which the analysis is targeted (i.e., the target population).

Step 2: Estimate how these people spend their money.

Step 3: Select items to represent the types of expenditures people usually make and outlets at which people typically make purchases.

Step 4: Conduct pricing surveys of the selected items in each area.

Step 5: Analyze cost ratios for the selected items and aggregate them according to the relative importance of each item.

2.2 Step 1: Identifying the Target Population

The study estimates living-cost differences for nonmilitary Federal employees who have annual base salaries between approximately \$12,000 and \$87,000, the range of the General Schedule. Because living costs may vary depending on an employee's income level, living costs are analyzed at three income levels.

2.2.1 Federal Salaries

To determine the appropriate income levels, OPM analyzed the 1994 distribution of salaries for all General Schedule employees in all of the allowance areas combined. OPM divided this distribution into three groups of equal size and identified the median salary in each of the groups. These values were then rounded to the nearest \$100 to produce the three representative income levels of \$20,800, \$31,500, and \$48,300.

The study analyzes living costs at each of these three income levels. The

results are three sets of estimated expenditures for each allowance area and for the Washington, D.C., area. To combine these estimated expenditures into a single overall index for the area, JFA used employment weights provided by OPM.

2.2.2 Federal Employment Weights

As with the income levels, the OPM employment weights were derived from the distribution of General Schedule employees by salary level. Using the salary parameters identified in the income analysis described above, OPM determined the number of General Schedule employees in each salary group in each allowance area. Using a moving average similar to that used with the CES data (see section 1.2.1), OPM combined these data with the same type of information for the previous two years and calculated the percent of the General Schedule workforce in each income group in each area. These percentages were the weights that JFA used.

In addition, OPM provided General Schedule employment weights to combine data in the three allowance areas in which two separate locations are surveyed. Those allowance areas are: Hawaii County, Hawaii; Puerto Rico; and the U.S. Virgin Islands. These areas are described in greater detail in section 2.5.6.1.

For these areas, OPM identified the number of General Schedule employees associated with each survey location and then combined this information with similar information from the previous two years again using a moving average. The employment counts were converted to percentages representing the proportion of the General Schedule population represented by each of the survey locations. JFA used the percentages as weights to combine the survey data from each survey area.

Appendix 2 shows the General Schedule employment distributions and how the percentage weights were derived.

2.3 Step 2: Estimating How People Spend Their Money

2.3.1 Consumer Expenditure Survey (CES)

Expenditure patterns for employees for all areas, including the Washington, D.C., area, are based on national data from the CES. OPM obtained from the Bureau of Labor Statistics "prepublished" CES results for 1988, 1991, and 1992. As discussed in section 1.2.1, these three years of CES data were combined using a moving average.

CES data are used in two ways: to identify appropriate items for survey

and to derive item, category, and component weights. The item weights are not income sensitive. However, aggregated CES data are analyzed by income level to derive category and component weights. These weights are income sensitive. The CES data used in this study are shown in Appendix 3 and 4.

The Bureau of Labor Statistics has advised OPM that "prepublished" CES data may not be statistically significant. To OPM's knowledge, however, it is the only source of comprehensive consumer expenditure information by income level. Therefore, it is used in the model.

2.3.2 Expenditure Categories and Components

The CES groups expenses into small, logical families of items. For example, the report divided money spent by families on beef into four groups: ground beef, roast, steak and other beef. The steak and roast groupings were further separated into smaller clusters of items (e.g., sirloin and round steak, chuck and round roast).

Using the CES data, the items were sorted into the four main cost components specified in OPM regulations: Consumption Goods and Services, Transportation, Housing, and Miscellaneous Expenses. To develop

weighting patterns for the three income levels, JFA performed linear regression analyses on the CES data shown in Appendix 3.¹ These analyses produced estimated expenditures at the three income levels identified in section 2.2.1 above. JFA converted these expenditures to percentages of total expenditures for the four components to produce the values shown in the table below. The values were the weights JFA used to combine the expenditures for each of the components into an overall value for each income level in each allowance area and the Washington, D.C., area.

TABLE 2-1.—COMPONENT EXPENSES EXPRESSED AS A PERCENTAGE OF TOTAL EXPENSES

Income level 1994	Income level 1991 adjusted	Goods and services (percent)	Housing (percent)	Transportation (percent)	Misc. (percent)	Total (percent)
\$20,800	\$19,250	40.10	25.01	18.93	15.96	100.00
31,500	29,150	39.47	23.98	18.66	17.88	100.00
48,300	44,700	38.87	23.01	18.41	19.71	100.00

(Values may not total because of rounding.)

Goods and services items were further sorted into ten categories and linear regression techniques were used to estimate expenditures on these ten categories by income level. The weights for these categories are shown in section 3.1. The same technique was also used to compute category weights for the Transportation and Miscellaneous Components and to produce ratios of renters to homeowners at each income level.

2.4 Step 3: Selecting Items and Outlets

2.4.1 Item Selections—The Marketbasket

As noted above, CES items were grouped into "clusters" of expenses to determine which items to survey. These clusters were chosen so that no marketbasket item would have overwhelmingly large or insignificantly small item weight.

For each of these clusters, a set of items to price was identified. Collectively, these items are called a "marketbasket." Because it would have been impractical to survey all of the thousands of items consumers might buy, the marketbasket contains representative items, such as cheddar cheese, that represent itself and the many other related items that consumers purchase (e.g., Edam, Gouda, Jack, Swiss, et cetera). JFA's marketbasket had more than 200 items ranging from table salt to new cars to home purchases.

The items selected were representative of other similar items, commonly purchased, and readily available in all areas. For example, a 10.5-ounce can of Campbell's vegetable soup was selected for survey because it is representative of canned and packaged soups, is a commonly-purchased brand, and is found in all areas. Whenever practical, the item description included the exact brand, model, type, and size, so that exactly the same items could be priced in all areas if possible. Appendix 5 provides a list of the items surveyed and their descriptions.

Changes to the item list and descriptions are an important aspect of the COLA survey. These changes are necessary to improve the survey and keep the items and descriptions current. For this survey, JFA changed several of the items or descriptions. The changes and the reasons for each are listed in Appendix 6.

2.4.2 Geographic Coverage and Outlet Selection

Just as it was important to select commonly-purchased items and survey the same items in all areas, it was important to select outlets frequented by consumers and find equivalent outlets in all areas. This involved deciding which geographic areas to survey and which outlets to survey within these geographic areas.

2.4.2.1 Geographic Areas

For some areas, the choice of which area(s) to survey was obvious. On St. Thomas, for example, the whole island is surveyed because St. Thomas is a relatively small island and Federal employees live throughout the island.

For other areas, those with multiple communities from which to choose, specific communities had to be identified. To do this, OPM used the results of the 1992 Federal Employee Housing and Living Patterns Survey. Among other things, that survey obtained information on where Federal employees lived. OPM used this information to select the communities in which housing costs would be priced. JFA then identified outlets within a normal shopping radius of these housing communities.

2.4.2.2 Similarity of Outlets

Whenever possible, JFA selected popular outlets that were comparable to outlets in all areas. For example, JFA surveyed the price of grocery items at supermarkets in all areas because most people purchase their groceries at such stores and because supermarkets are

¹ The midpoint of the moving average of CES data was 1991. Therefore, for the purposes of these regressions, OPM provided adjusted Federal salaries to reflect 1991 pay rates. OPM used the pay increases for 1992 (4.2%), 1993 (3.7%), and 1994 (0.0%) to deflate the 1994 salaries. This produced adjusted Federal salaries of \$19,250, \$29,150, and \$44,700 for use in the regression equations.

found in all areas.² The selection of comparable outlets was particularly important because comparing the prices of items purchased at dissimilar outlets would be inappropriate (e.g., comparing the price of a box of cereal at a supermarket with one sold at a convenience store).

Although major supermarkets, department stores, and discount stores represented a sizable portion of the survey, JFA also selected outlets to represent the diversity of consumer shopping. For example, JFA could have used department stores for pricing all clothing items surveyed. This would not, however, have reflected the range of consumer choices. Therefore, JFA also priced some clothing items in men's and women's clothing stores, other clothing items in department stores, others in shoe stores, and still others in discount stores. For each item, the same type of outlet (e.g., clothing store, discount store, department store) was selected in each area whenever possible.

2.4.2.3 Catalog Pricing

A limited amount of catalog pricing was included in the survey to reflect this common purchasing option. Eight item prices were surveyed by catalog. OPM selected these items based on comments it received from Federal employees. Catalog pricing also allowed the comparison of comparable items that would have been difficult to price otherwise. Of course, all catalog prices included any charges for shipping and handling and all applicable taxes.

2.5 Step 4: Surveying Prices

As noted earlier, JFA obtained approximately 12,000 prices on more than 200 items from 3,000 outlets. In each survey area, JFA attempted to get at least three price quotes for each item, with certain exceptions. For example, essentially all of the available home sales and rental data meeting the specifications were obtained. For other items, such as utilities and real estate tax rates, only one quote was obtained in each area because these items have uniform rates within an area. Because the Washington, D.C., area has six survey communities, JFA attempted to get at least 18 price quotes for most items in this area.

² In the Washington, DC, area, JFA surveyed groceries at two kinds of supermarkets (i.e., full-service supermarkets and "warehouse-type" supermarkets) because both types of grocery stores are common in this area. JFA did not survey "warehouse-type" grocery stores in any other area because they are relatively uncommon and not frequented by most Federal employees.

To accomplish this, JFA used various information-gathering approaches. These are described below.

2.5.1 In-House Research Staff

JFA's research personnel, and those of Runzheimer, its subcontractor, played a major role in all data-collection activities. These professionals:

- Contacted manufacturers, trade associations, governmental agencies, and retail establishments to ensure that suitable items were selected and priced at common types of outlets;
- Contacted real estate professionals in each survey area to obtain general information as well as specific rental rates and home market values;
- Conducted pricing surveys onsite and by telephone;
- Served as a liaison for field researchers who collected price information onsite;
- Performed hundreds of quality control checks, often verifying survey data through telephone calls and comparing current data-gathering results with those from earlier surveys; and
- Analyzed and computed the item, category, component, and total comparative cost indexes.

2.5.2 Field Researchers—"Research Associates"

Most of the price data were collected onsite by Research Associates (RA's). The RA's were independent contractors, hired by JFA to visit retail outlets in each area and collect prices. All of these RA's were residents of the area. To avoid any real or perceived conflicts of interest, JFA refrained from hiring research associates who were either employees of the Federal government or who had immediate family who were employees of the Federal government.

2.5.3 Data Collection Materials

The living-cost surveys conform with the provisions of the Paperwork Reduction Act and are approved by the Office of Management and Budget (OMB). The OMB-approved survey collection materials are found in Appendix 7. All JFA-developed worksheets or other survey materials conformed with those approved by OMB.

2.5.4 Inclusion of Sales and Excise Taxes

For all items subject to sales and/or excise tax, the appropriate amount of tax was added prior to analysis. JFA gathered applicable information on taxes by contacting appropriate sources of information in the allowance areas and the Washington, DC, area. JFA also

used appropriate tax publications, such as the State of Maryland's *Sales and Use Tax Laws and Regulations* and the "General Excise Tax Law" (Chapter 237) of the *Hawaii Tax Reports*.

2.5.5 JFA's Onsite Visits

Full-time JFA research professionals traveled to each allowance area to supervise data collection activities and perform various quality control checks as necessary. These visits all occurred during the pricing period so that these professionals could answer any of the RA's data collection questions or provide additional training and instruction if necessary.

The researchers visited living communities within the allowance areas to look at housing and to talk with local real estate professionals. They also visited numerous retail outlets to verify that comparable items were being priced at comparable outlets. In addition, they obtained general information about the local economy.

2.5.6 Special Considerations in Selected Areas

2.5.6.1 Pricing Surveys in Hawaii County, Puerto Rico, and the Virgin Islands

Three allowance areas have multiple survey areas: Hawaii County, Hawaii; Puerto Rico; and the U.S. Virgin Islands. In Hawaii County, surveys were conducted in Hilo and in the Kailua Kona area. In Puerto Rico, surveys were conducted in San Juan and in Mayaguez; and in the Virgin Islands, surveys were conducted on St. Croix and St. Thomas.

The survey data for each of these separate survey areas had to be combined to represent the allowance area overall. To do this, OPM provided JFA with weights based on the distribution of General Schedule employees in these areas. These weights are shown in Appendix 2 and are computed using three years of data and the moving-average approach described earlier.

2.5.6.2 Surveying the Washington, DC, Area

As noted earlier, JFA attempted to get more price quotes in the DC area than in the allowance areas because of the size and diversity of the Washington metropolitan area. For the purposes of the COLA surveys, the DC area was divided into six survey areas: two in the District of Columbia, two in Maryland, and two in Virginia. The specific areas surveyed were within a normal shopping radius of the housing communities identified in Appendix 9. Survey data from each of the six DC

survey areas were combined using equal weights.

2.6 Step 5: Analyzing Data and Computing Indexes

2.6.1 General Formulae

2.6.1.1 Indexes

Nonforeign area COLAS are derived from the living-cost indexes. These indexes are mathematical comparisons of living costs in the allowance areas compared with living costs in the Washington, DC, area.

At the most fundamental level, an index is a way to state the difference between two prices (or sets of prices). For example, if a can of green beans costs \$1.00 in the allowance area and 80 cents in the DC area, green beans are 25 percent more expensive in the allowance area than in DC. That difference can also be stated as a price index of 125.

2.6.1.2 Item Weights

JFA computed indexes for hundreds of items. To combine these indexes, JFA used weights derived from the CES. These weights reflected the relative amount consumers normally spend on different items. For example, the price of a can of green beans has a lower weight than the price of a pound of apples because, according to the CES, people generally spend less on green beans than on apples.

The COLA model uses a fixed-weight indexing methodology. This means that the same expenditure weights are used in the reference area (i.e., the DC area) and in the allowance areas. The weights used are based on the expenditure patterns of consumers nationwide as reported by the CES. This is the only source, of which OPM is aware, that provides expenditure information by income level.

2.6.1.3 Category and Component Weights

As described in section 2.3.2, JFA also computed income sensitive category and component weights. This allowed the combination of item prices in a manner that reflected the different spending patterns of people at different income levels. How this was accomplished differed among the components.

For the Goods and Services and Miscellaneous Expense components, JFA simply combined indexes within each category using the CES weights to derive an overall index for the category. The category indexes were then combined into an overall component index using the income-sensitive category weights described above.

For the Transportation and Housing Components, JFA used the above approach in combination with a cost-build-up approach. For example, for each area the annual cost of owning and

operating an automobile was computed by taking individual prices (e.g., automobile financing, insurance, gas and oil, and maintenance) and computing an overall dollar cost for each area. These costs were compared with those in the DC area to compute the Private Transportation Category index. This index was then combined with the Other Transportation Category index using income sensitive category weights to compute an overall Transportation Component index for each area.

2.6.2 Computing the Overall Index

The item, category, and component indexes were combined using the process prescribed in Section 591.205(c), title 5, Code of Federal Regulations. That is a five-step process that involves converting the indexes to dollar values and weighting these, combining them, and comparing them to compute a final weighted average index. The process is described below.

First, JFA used the CES data and the income ranges described in section 2.2.1 to determine the amount of money consumers typically spend on each component at each income level. These amounts appear in the table below and in Appendix 20. They were derived by taking the component weights shown in Table 2-1 times the representative income levels described in section 2.2.1.

TABLE 2-2.—TYPICAL CONSUMER EXPENDITURES BY INCOME LEVEL AND COMPONENT

Income level	Goods and services	Own/rent	Transportation	Misc.	Total
Lower	\$8,341	\$5,202	\$3,938	\$3,320	\$20,800
Middle	12,433	7,555	5,879	5,634	31,500
Upper	18,775	11,114	8,892	9,520	48,300

(Note: Values may not total because of rounding.)

Second, for each allowance area, JFA multiplied the dollar values above by the component indexes for the allowance area. Because the housing component consisted of two indexes (one for owners and another for renters), two sets of total relative costs were produced—one for owners and another for renters.

Third, for each allowance area and income level, JFA combined the total relative costs for owners and renters using as weights the proportion of owners and renters as identified in the CES. (See section 4.2.1.) This produced an overall expenditure dollar amount

for each income level in each allowance area.

Fourth, JFA computed a single overall average expenditure for each allowance area by combining the income level expenditures and using the allowance area General Schedule employment distribution as weights. This produced a single overall dollar expenditure value for the allowance area. Using the same General Schedule employment weights, JFA also computed a single overall dollar expenditure value for the DC area.

The final step was to divide the overall average dollar expenditure for the allowance area by the overall

average dollar expenditure for the DC area to compute a final index. These indexes are shown in the last section of this report and in Appendix 20.

3. Consumption Goods and Services

3.1 Categories and Category Weights

Based on the CES data, JFA identified ten categories of expenses within the Goods and Services Component. Using linear regression analyses and the CES data, JFA identified the portion of total Goods and Services expenditures that the typical consumer spends in each category at various income levels. The categories and the relative expenditures are shown in the table below:

TABLE 3-1.—CATEGORY WEIGHTS EXPRESSED AS A PERCENTAGE OF GOODS AND SERVICES EXPENDITURES BY INCOME LEVEL

Category	Income levels		
	Lower	Middle	Upper
Food at Home	26.40	23.49	20.65
Food Away from Home	14.42	14.73	15.04
Tobacco	3.15	2.59	2.05
Alcohol	2.77	2.73	2.69
Furnishings and Hsld. Op.	14.71	15.79	16.85
Clothing	13.97	14.65	15.30
Domestic Service	1.76	1.90	2.04
Professional Services	6.48	6.65	6.82
Personal Care	3.62	3.52	3.43
Recreation	12.72	13.94	15.14
Totals	100.00	100.00	100.00

(Note: Values may not total because of rounding.)

3.2 Goods and Services Data Collection—Special Considerations

3.2.1 Exchange and Commissary Expenditure Research

Executive Order 10000, as amended, requires OPM to adjust COLA rates when employees have special purchasing privileges, such as unlimited access to commissaries and exchanges. In Guam, employees have such access, so OPM directed JFA to price the same marketbasket of Goods and Services items at the commissaries and exchanges in Guam as it used for the local retail pricing. One price quote was obtained for each marketbasket item found in these facilities.

It was not assumed that people with access to military facilities made all purchases in these facilities. Instead, the results of an OPM survey of Federal employees was used to determine the percentage of purchases that families typically make in military facilities versus local outlets. For example, as the following table shows, it is estimated that employees with commissary/exchange access in Guam, purchase approximately 70% of their Food at Home items at a commissary and purchase the remaining 30% of such items in local retail outlets.

TABLE 3-2.—PERCENTAGES OF PURCHASES MADE AT THE COMMISSARIES AND EXCHANGES IN GUAM

Category	Per-centage
Food at Home	70.0
Food Away	0.0
Tobacco	64.0
Alcohol	76.0
Furnishings. and Hsld. Op.	64.5
Clothing	43.7

TABLE 3-2.—PERCENTAGES OF PURCHASES MADE AT THE COMMISSARIES AND EXCHANGES IN GUAM—Continued

Category	Per-centage
Domestic Service	0.0
Professional Services	0.0
Personal Care	49.3
Recreation	49.7

These percentages were used to aggregate the local retail and commissary/exchange prices into one set of appropriate, blended prices, hereinafter referred to as the Commissary/PX prices. The blended prices were compared to the local retail prices in the Washington, DC, area to compute Commissary/PX Goods and Services Category indexes, which were then combined using CES weights to derive an overall Commissary/PX Goods and Services Component index. Just as with the Guam Local Retail Goods and Services Component index, the Guam Commissary/PX Goods and Services Component index was combined with the indexes for the Housing, Transportation and Miscellaneous Expense Components to derive a single, overall Commissary/PX index for the Guam allowance area.

3.2.2 Restaurant Pricing

To ensure comparison of prices at comparable restaurants among areas, OPM asked JFA to classify the restaurants it surveyed into two groups: family dining and fine dining. JFA used such characteristics as menu selections, atmosphere, table setting, seating, reservations, and American Automobile Association rating to make these distinctions. In addition, OPM also directed JFA to survey 100% of selected

family restaurants for breakfast, approximately 75% for lunch, and about 67% for dinner. This allowed comparison of meal prices at a comparable mix of restaurants in all areas.

3.3 Goods and Services Survey Results

Section 2.6 of this report provides a detailed explanation of the economic model used to analyze the price data. As it applies to Goods and Services, the approach involved comparing the average prices of marketbasket items in each allowance area with those in the Washington, DC, area. The resulting price ratios were aggregated into subcategory and then category indexes using the moving-average expenditure weights derived from the CES data.

Appendix 8 shows for each allowance area ten category indexes, the weights used at each of the three income levels, and the overall Goods and Services indexes. The Washington, DC, area is not shown because it is, by definition, the reference area. Therefore, the DC indexes are 100.

4. Housing

4.1 Component Overview

The Housing component consists of expenses related to owning or renting a dwelling. These are—

- mortgage or rent payments,
- utilities,
- real estate taxes,
- homeowner's or renter's insurance,
- home maintenance, and
- telephone.

At each of the three income levels, JFA measured separately the annual housing costs for homeowners and renters. The results were then combined using as weights the percentages of owners and renters reported by the CES.

4.2 Housing Model

4.2.1 Expenditure Research

The CES was used to determine the national average ratio of families who

own, as opposed to rent, their residences. Using the expense data by income range as input into a linear regression analysis, JFA calculated the owner and rent weights shown below.

JFA excluded expenditure data for home owning families without a mortgage because they were not typical of homeowners in the base area or in the allowance areas.

TABLE 4-1.—OWNER/RENTER WEIGHTS

Category	Income levels		
	Lower (percent)	Middle (percent)	Upper (percent)
Homeowner with mortgage	38.41	47.46	61.67
Renter	61.59	52.54	38.33
Totals	100.00	100.00	100.00

The CES data were also used to identify which home-maintenance items to price and to establish the relative importance of those items.

4.2.2 Housing Profiles

To compare housing costs in all locations, six typical housing profiles are used and are assigned to the three income levels, as shown in the table below. OPM requested that at least one criterion for the owner profile be the square footage of the home and at least one criterion for the renter profile be the number of bedrooms in the rental unit.

TABLE 4-2.—HOUSING PROFILES

Income level	Renter profile	Owner profile
Lower	3 rooms, 1 BR, 1 bath, 600 sq. ft. apartment ..	4 rooms, 2 BR, 1 bath, 900 sq. ft. condo or detached house.
Middle	4 rooms, 2 BR, 1 bath, 900 sq. ft. apartment ..	5 rooms, 3 BR, 1 bath, 1,300 sq. ft. detached house (rowhouse in NE DC).
Upper	4 rooms, 2 BR, 2 baths, 1,100 sq. ft. town-house or detached house.	7 rooms, 3 BR, 2 baths, 1,700 sq. ft. detached house.

The home sizes stated above are the representative sizes used for certain calculations in the model. They are not, however, the only size surveyed for each profile. For rentals, JFA obtained rental rates on any unit, regardless of its size, that otherwise meet the profile characteristics. For home sales, JFA obtained the prices of homes within size range and otherwise meeting the profile specifications. The size ranges are shown below:

TABLE 4-3.—HOME SIZES SURVEYED

Income level	Range
Lower	600 to 1,200 sq. ft.
Middle	1,000 to 1,600 sq. ft.
Upper	1,400 to 2,300 sq. ft.

It should be noted that although the size ranges overlap, no home sale observation could be used at more than one income level. Application of the other criteria (i.e., number and types of rooms) ensured that each observation was assigned to the appropriate income level even though its size was common to two income levels.

4.2.3 Living Community Selection

As discussed briefly in sections 1.2.2 and 2.4.2.1, OPM identified the living communities to be surveyed based on the results of the 1992 Federal Employee Housing and Living Patterns Survey. This resulted in many survey community changes in both the allowance areas and in the Washington, DC, area. The communities surveyed are identified in Appendix 9.

As with previous surveys, nine homeowner and nine renter communities were identified for the Washington, DC, area—one for each income level in each of the three areas (DC, Maryland, and Virginia). In the allowance areas, up to three homeowner and three renter communities were identified—one for each income level.

The three-community owner/renter goal was not achievable in many of the smaller allowance areas due to the relatively few home sales and rental opportunities in these areas. In such areas, OPM directed JFA to collect prices for the entire survey area or allowance area rather than in specific communities. This was done in Hilo, Kailua Kona, Kauai, Maui, Guam, Mayaguez, St. Croix, and St. Thomas. In these areas, all home sales and/or rental

rates meeting the housing profile characteristics for the particular income group were included in the analysis.

4.2.4 Housing-Related Expenses

Based on the CES data, housing-related expense items are categorized into one of five groups in the COLA model. These groups are—

- utilities,
- real estate taxes,
- owners/renters insurance,
- maintenance, and
- telephone.

4.2.4.1 Utilities

Electricity, oil, gas, water, and sewer are the utilities used in the model. Most utility companies are able to provide current charges per unit of consumption and average consumption patterns for all households. The companies were not, however, able to provide separate consumption patterns by the size or type of housing.

Because many utility costs vary by size of house, a factor is needed to derive the utility rates at each of the home profiles. The table below shows the standard square foot sizes and utility factors used for each home profile. The factors are calculated by assuming that utility use increases or decreases at half

the rate that square footage increases or decreases.

TABLE 4-4.—UTILITY FACTORS

Income level	Renter profile		Owner profile	
	Sq. ft.	Factor	Sq. ft.	Factor
Lower	600	.73	900	.85
Middle	900	.85	1,300	1.00
Upper	1,100	.92	1,700	1.15

In each area, JFA obtained the price of each of the types of utilities noted above. JFA used average annual consumption per household information gathered from utility companies serving each area to compute average annual utility costs. The above factors were then used to adjust the total annual utility costs for each of the various housing profiles.

4.2.4.2 Real Estate Taxes

For this study, JFA contacted the city assessors in each allowance area and in the Washington, DC, area to obtain real estate tax information on the living communities surveyed. Real estate tax formulas were obtained for most living communities. Actual or representative tax amounts were obtained in other communities (e.g., Puerto Rico) where formulas were not available or directly applicable.

4.2.4.3 Owners/Renters Insurance

Homeowners' insurance rates are gathered for each of the survey areas for both renter and owner profiles. For renters, the following estimated content values were used: \$20,000 at the lower and middle income levels and \$30,000 at the upper income level.

For homeowners, the cost of insurance was dependent on the average home values calculated as part of this survey. In most areas, it was assumed that the structure was equal to 80 percent of the total home value. In Hawaii, where land prices tend to be higher, it was assumed that the structure was equal to 50 percent of the total home value.

Previous research, conducted by Runzheimer International for OPM, found that insurance coverage for disasters, such as floods and earthquakes, were not widely purchased in the allowance areas. Therefore, the COLA model does not include these additional riders. (See Report to OPM on Living Costs in Selected NonForeign Areas and in the Washington, DC Area, June 1992 at 57 FR 58556). Hurricane and typhoon coverage, however, is common in Hawaii, Guam, and the U.S. Virgin Islands, and was included either in the insurance quote obtained or

priced as a separate rider and added to the total insurance costs for these areas.

4.2.4.4 Home Maintenance

Estimated home maintenance expense was computed for each of the homeowner profiles. Maintenance costs were not added in the three renter profiles because most, if not all, maintenance expenses are covered by the landlord.

As was done in previous surveys, JFA priced both home maintenance services as well as home maintenance commodities, using the CES information to identify items to price and the weights associated with these items. The maintenance service items priced were interior painting, plumbing repair, electrical repair, and pest control. The maintenance commodities priced were bathroom caulking, kitchen faucet set, an electrical outlet, latex interior paint, and a fire extinguisher.

To compute home maintenance cost differences between each allowance area and the Washington, DC, area for the homeowner profiles, an index was computed for each maintenance item by comparing the allowance area price to the DC area price. As with the Goods and Services Component items, the CES data were used to weight these maintenance indexes into an overall home maintenance index for each area.

To combine the maintenance indexes with the other homeowner costs, which were expressed in dollar amounts, JFA converted the indexes to dollars by multiplying the index for each area by the average maintenance expense reported in the CES. This cost was assigned to the middle-income homeowner profile.

Logically, maintenance costs for larger homes would generally be greater than costs for middle-sized homes, while costs for smaller homes would generally be less. Therefore, the same homeowner multipliers used in the utilities model for the lower and upper income profiles (.85 and 1.15 respectively) are applied to recognize differences in maintenance costs due to house size.

4.2.4.5 Telephone

Telephone expense consisted of local service charges, additional charges for local calls (if applicable), and charges for long distance calls. To measure estimated expenses for local service and local calls, JFA surveyed the cost of touch-tone service with unlimited calling in each area.

To estimate long distance charges in all areas, JFA surveyed the cost of three, ten-minute direct dial calls per month to large U.S. mainland cities (i.e., Los Angeles, Chicago, and New York City).

JFA measured the price of a call placed in the survey area at the time of day necessary to be received in the respective city at 8:00 p.m. local time. In many areas, this resulted in pricing a combination of daytime and evening-rate calls.

4.3 Housing Data Collection Procedures

As was done in previous years, JFA collected housing information mainly from real estate professionals, various listings services, and advertisements. In addition, JFA personnel traveled to each of the surveyed communities to assess the compatibility of the housing community with the income level for which the data were used and to ensure that homes in these communities were comparable to those in the Washington, DC, area.

4.3.1 Homeowner Data Collection

JFA obtained selling prices of homes that matched the housing profiles in each living community. JFA obtained as many of these selling prices as possible for sales that occurred during the 6-month period prior to the date of the survey.

The amount of data obtained depended on the number of home sales in the community and the availability of square footage and other housing profile information. This in turn depended on the size of the community, economic conditions, quality and quantity of the realty data available, and the willingness and ability of local realty professionals and assessor offices to provide data.

If sales data obtained from the preliminary data sources did not meet specified contract minimums, JFA contacted additional data sources in the area to attempt to secure more sales data, if practical. In this manner, either all or a sizeable portion of the home sales in each area were surveyed.

4.3.2 Renter Data Collection

Rental data also were obtained from a variety of sources, e.g., brokers, rental management firms, property managers, newspaper advertisements, and other listings. Analyses of these data revealed what appeared to be two separate rental markets: a broker market and a non-broker market. Rental rates and estimates provided by brokers generally exceeded those obtained from other sources. The methodology used to analyze these two data sets is discussed in section 4.4.2.

4.4 Housing Analysis

4.4.1 Homeowner Data Analysis

One of the most important factors relating to the price of a home is the number of square feet of living space. In the past, OPM directed the contractor to rank housing data high to low and trim equal numbers of observations from both ends of the data. The average of the remaining values was then used. This year, OPM changed the methodology and used the median home value rather than trimming and averaging. The median is the middle value in a rank-ordered set of observations. The purpose of either approach is to reduce the volatility of the housing data from one survey to the next because a relatively few extremely high or low home prices could significantly influence average housing costs.

For each income profile in each allowance area and the Washington, DC, area, JFA computed the median price per square foot for the comparables. This value was then multiplied by the reference square footage for the profile to determine the average home value for the profile.

Another change that OPM made this year was to ask JFA to use historical housing data in addition to data collected this year. These data are found in Appendix 10 of this report. The historical data are from previous living-cost surveys that were published in the Federal Register beginning with the 1990 report. (See Appendix 1 for a listing of these publications). The data for the period prior to 1990 were published with the results of the 1991–1992 living cost surveys at 57 FR 58618. All housing values are based on the community selections and analytical methodologies used at the time of each respective survey.

The historical housing data used were the estimated annual principal plus interest payments by income level in each area. To combine these data, OPM supplied JFA with weights that were derived from the 1992 Federal Employee Housing and Living Patterns Survey. These weights reflect the proportion of Federal employee homeowners by year of purchase or acquisition in all allowance areas and in the Washington, DC, area. The historical housing weights and analyses are shown in Appendix 11.

4.4.2 Rental Data Analysis

JFA assigned each rental quote data point to a single income level, based on the following criteria:

—One bedroom apartments: Lower Income Level,

—Two bedroom apartments: Middle Income Level, and
—Townhouses and detached houses with a minimum of two bedrooms: Upper Income Level.

As discussed earlier, there were essentially two sources of rental information: broker and non-broker sources. In each area, the quantity of data obtained from either source-type varied significantly. Therefore, analyzing all of the rental data (both broker and non-broker) together for an area and income level was undesirable.

Instead, OPM instructed JFA to analyze broker and non-broker data separately by income level. As with the housing data analyses, OPM changed from the use of trimming and averaging to the use of the median. Therefore, for each income level, JFA ranked the rental rates from low to high separately for broker and non-broker data. The median values for broker and non-broker data for each group were determined and then averaged to compute a single rental value for each income level. Because OPM has no information on how the Federal employees who rent generally secure their lodgings, OPM requested that JFA apply equal weights to the broker and nonbroker data to compute an overall average rental rate for the area and income level. The broker and non-broker medians and final results are shown in Appendix 12.

4.5 Housing Survey Results

In the above sections, the processes used for determining the costs for maintenance, insurance, utilities, real estate taxes, rents, and homeowner mortgages were described. Appendix 13 shows the cost of each of these items for renters and homeowners in each allowance area and in the Washington, DC, area.

Appendix 14 compares the total cost of these items by income level in each allowance area with the total cost of the same items by income level in the Washington, DC, area. Again, there are separate comparisons for renters and homeowners.

The final housing-cost comparisons take the form of indexes that are used in Appendix 20 to derive the total, overall index for owners and renters. (Refer to Section 2.6 for a discussion of the general formulae and how the component indexes are combined.)

5. Transportation

5.1 Component Overview

The transportation component consists of two categories: Automobile Expense and Other Transportation Costs. The Automobile Expense

Category reflects costs relating to owning and operating a car in each area. The Other Transportation Costs Category is represented by the cost of air travel from each location to a common point within the contiguous 48 states.

5.2 Private Transportation Methodology

As was done in previous surveys, JFA analyzed automobile transportation costs for three commonly purchased vehicles: a domestic auto, an import auto, and a utility vehicle. New car costs were used for these analyses because it was believed that pricing used vehicles of equivalent quality in each area could introduce inconsistencies because of the value judgements that would be required.

5.2.1 Vehicle Selection and Pricing

The three vehicles selected for analysis were:

Domestic—Ford Taurus GL 4-door sedan 3.0L 6 cyl,
Import—Honda Civic DX 4-door sedan 1.5L 4 cyl, and
Utility—Chevrolet S10 Blazer 4X4 2 door 4.3L 6 cyl.

These are the same models that were surveyed in previous years and were selected based on their popularity in the United States as demonstrated by owner registration data.

For each model car, JFA collected new vehicle prices at dealerships in each area and from secondary sources, such as the *Kelly Blue Book*. All prices were based on the manufacturers' suggested retail prices (MSRP) for 1994. (OPM did not believe it was feasible to collect information on the negotiated price for these vehicles.) All vehicles were equipped with standard options, such as automatic transmission, AM/FM stereo radio and air conditioning.

In addition to the MSRP, the price included additional charges such as shipping, dealer preparation, additional dealer markup, excise tax, sales tax, and any other one-time taxes or charges. In Hawaii, for example, documentation fees were also included as part of the new-vehicle costs.

Rustproofing was priced in all areas, including the Washington, DC, area. In previous surveys, the contractor found that auto dealers in the DC area did not recommend vehicle rustproofing, although it was a commonly suggested option in the allowance areas. This year, the information collected suggested that rustproofing was a commonly offered option in all areas. Therefore, OPM directed JFA to include the cost of rustproofing in the DC area as well as the allowance areas.

5.2.2 Vehicle Trade Cycle

Calculating the cost of owning and operating a vehicle requires knowing the miles driven and how long the car is owned. In the automobile industry, these two factors are known collectively as a vehicle's "trade cycle." The trade cycle is stated as a length of time (in months or years) and the total number of miles driven in that time period. This information is used in the model to compute annual costs related to fuel, oil, tires, maintenance, and depreciation.

As with the previous living-cost analyses, JFA used a four-year, 60,000-mile trade cycle in all areas. This was based upon the following information:

- The Internal Revenue Service uses this trade cycle to compute the allowable cents-per-mile reimbursement rate for persons who drive their personal vehicle for business purposes;
- The four-year time period coincides with the typical length of a vehicle loan; and
- U.S. Department of Energy statistics for 1988 show that the annual average for number of vehicle miles driven in the United States was 18,595 per household and 10,246 miles per vehicle.

5.2.3 Fuel Performance and Type

All vehicles included in this study used regular unleaded fuel. JFA surveyed self-service cash prices of unleaded regular gasoline at name-brand gas stations in each area.

To establish average fuel-performance ratings, the COLA model uses the "city driving" figures published by the U.S. Environmental Protection Agency (EPA). The "city" instead of "highway" figures are used because all locations contained considerable stop-and-go driving conditions.

As in previous COLA surveys, JFA included in its analysis the following fuel-performance factors: temperature, road surface, and gradient. These factors are based on research previously conducted for OPM. This research and the factors are discussed below.

5.2.3.1 Impact of Temperature Upon Fuel Performance

Gas mileage is affected by temperature. The lower the temperature, the fewer miles-per-gallon achieved and vice versa. According to the EPA's *Passenger Car Fuel Economy: EPA and*

Road, the temperature at which no adjustments to fuel performance occur is 77°F. Below that temperature, miles-per-gallon achieved drops; above 77° miles-per-gallon achieved improves. The model uses the average monthly temperatures for each allowance area and the Washington, DC, area as reported in *The Weather Almanac*, published by Ruffner and Blair.

For each location and month, the model uses the appropriate factor from the EPA study based on the average monthly temperature for the area. These factors are then averaged to derive a single overall factor for each location. The results of these calculations are shown in section 5.2.3.4.

5.2.3.2 Impact of Road Surface Upon Fuel Performance

For the model, it is assumed that Federally controlled roadways are typically composed of concrete and/or highload asphalt and that locally controlled roadways are typically composed of low-load asphalt. EPA's research indicates that cars are generally more fuel-efficient on the firmer, high-load surfaces than on the softer, low-load surfaces.

Although traffic patterns and road usage vary among areas, previous research conducted for OPM produced no relevant findings regarding this issue. Therefore, the model uses the assumption that Federally controlled roadways generally support twice the traffic of, or are used at least twice as much as, locally controlled roadways.

In each allowance area, the total mileage falling into either the Federal or local categories was collected. For example, Hawaii contains 1,456 miles of Federally controlled roads and 2,606 miles of locally controlled roads. The usage assumption increased Federal road mileage by a factor of two.

The average low-load asphalt factor (which reflects dry, wet, and snowy conditions) is applied to the local mileage percentage, and the average concrete and/or high-load asphalt factor is applied to the Federal mileage percentage to produce a weighted average factor for each area. The weighted factor is 0.98 for the allowance areas. The Washington, DC, area is assigned a factor of 1.00 on the premise that the vast majority of traffic in that area travels on dry, high-load surfaces. The application of these factors is described in section 5.2.3.4.

5.2.3.3 Impact of Gradient Upon Fuel Performance

The effect of gradient on gas mileage is also estimated from EPA's *Passenger Car Fuel Economy: EPA and Road*. Local topography (i.e., gradient) affects fuel efficiency. EPA provides mileage factors based upon various gradients ranging from less than 0.5% (essentially flat) to greater than 6% (steep).

In research previously conducted for OPM, the contractor reviewed the topographic features of each area and found a wide range of road conditions. However, the contractor was unable to find relevant information on the types of terrain drivers typically encounter in each area or the number of miles drivers travel in each type of terrain. Lacking such information, the contractor assumed that drivers in the allowance areas generally traveled roads having approximately the same gradients that are found on average in the United States.

Applying the information from EPA's research, a fuel-performance factor of 0.981 was computed for this type of driving. This factor was assigned to each allowance area. For the Washington, DC, area, a factor of 1.00 was used on the premise that the vast majority of traffic in that area travels on major freeways and highways that are relatively flat. The application of these factors is described in the next section.

5.2.3.4 Overall Impact Upon Fuel Performance

JFA applied the factors described above to make adjustments to the average gas mileage ratings for each type of automobile surveyed for each allowance area and for the Washington, DC, area. The adjustment factors compound—that is, the total adjustment is the result of multiplying the three individual factors together for each area.

In the table below, the factor 1.00 means that no adjustment to EPA fuel performance is appropriate. A factor of less than 1.00 means that the estimated gasoline mileage in the area is less than the EPA average. For example, the total adjustment factor for Guam is 0.95. This means that the estimated gasoline mileage in Guam is 95% of the EPA estimated average. Note that the adjustment factor for the DC area (0.94) indicates that average gasoline mileage in that area is also below the EPA estimate.

TABLE 5-1.—SUMMARY OF FUEL-PERFORMANCE ADJUSTMENTS

Location	Temperature	Road surface	Gradient	Total
Hawaii	0.99	0.98	0.98	0.95
Guam	0.99	0.98	0.98	0.95
Puerto Rico	1.01	0.98	0.98	0.97
Virgin Islands	1.01	0.98	0.98	0.97
Washington, DC	0.94	1.00	1.00	0.94

5.2.4 Vehicle Maintenance

As was done in the previous surveys, JFA surveyed the cost of five common maintenance services and repairs performed on the vehicles surveyed. The services and repairs were—

- Tuneup,
- Oil change,
- Automatic transmission fluid change,
- Flush/fill coolant, and
- Muffler/exhaust pipe replacement.

Where appropriate, the automobile manufacturers' recommended maintenance schedules were used to determine the frequency of performing each of these maintenance jobs. Maintenance schedules vary, depending on the driving conditions typically encountered. Consistent with the assumptions used for fuel economy and tire mileage, it was assumed that driving conditions in the allowance areas are generally severe, and the maintenance schedules used reflected that kind of driving. For the DC area, it was assumed that driving conditions were normal, and the maintenance schedules used for that area reflected that kind of driving.

The recommended frequency of performing each of these jobs was combined with the prices charged by local dealers and service stations to compute an estimated annual maintenance expense. As with previous surveys, JFA collected specific parts costs and hourly labor costs in each location and used Chilton's Labor Guide and Parts Manual to determine service times and parts required for each maintenance procedure.

5.2.5 Tires

Research previously conducted for OPM revealed that various factors (e.g., road quality/state of repair, road composition) appeared to reduce tread life (i.e., the average number of miles a tire is expected to last) in the allowance areas compared with the Washington, DC, area. Based on this research, the model uses tire expense based on a 40,000-mile tread life in allowance areas and a 55,000-mile tread life in the DC area.

JFA priced the cost of a new set of tires, including mounting and balancing and all applicable taxes, in each area.

This cost was converted into an annual cost by dividing the estimated number of annual miles driven by the expected tread life and multiplying this by the new tire price.

5.2.6 License and Registration Fees, and Miscellaneous Tax

JFA obtained information regarding license registration fees and personal property tax (where applicable). License and registration fees were included as part of the annual cost of owning an automobile. Personal property tax was computed for each year of the vehicle's four-year trade cycle using the vehicle's estimated used-car value for each year. The resulting four personal property tax values were then averaged, and that average was included as part of the annual cost of owning an automobile.

As stated in section 5.2.1, sales and excise taxes were included in the purchase price of the vehicle and were accounted for under the annual vehicle purchase and finance costs.

5.2.7 Depreciation

The single largest annual expense related to owning and operating a new car is depreciation—the lost value of the vehicle as it ages and is driven. Total depreciation is calculated by subtracting from the purchase price the estimated residual value (used car value) four years later. This value is then divided by 4 to produce an annual depreciation amount.

As described earlier, the new car price is the manufacturer's suggested retail price plus any additional charges, such as shipping, dealer prep, additional dealer markup, excise tax, and sales tax. As was done in previous surveys, the used car value was based on information from the *Black Book Official Finance/Lease Guide for 1994*. Although this source only tracks prices of vehicles sold in the contiguous 48 states, research performed by the previous OPM contractor produced no conclusive evidence that used cars in allowance areas were (on average) worth more or less than used cars in the DC area. Therefore, consistent with previous surveys, the used car prices for

each make and model were held constant among the areas.

It should be noted that identical residual values did not result in identical depreciation amounts. Depreciation amounts were higher in the allowance areas than in the Washington, DC, area because new car prices are higher in the allowance areas.

5.2.8 Finance Expense

For the model, it is assumed that new car purchases are financed. Therefore, JFA surveyed banks in all areas to obtain their auto-loan interest rates for a 48-month loan with 80 percent financing. The finance cost for each vehicle in each area was computed and included in the annual cost of owning and operating an automobile.

5.2.9 Vehicle Insurance

JFA surveyed the cost of car insurance in each location. Consistent with the previous year's survey, JFA used the following common coverages, limits, and deductibles:

Bodily Injury	\$100,000/\$300,000.
Property Damage	50,000.
Medical	5,000.
Uninsured Motorist ..	100,000/300,000.
Comprehensive	100 Deductible.
Collision	250 Deductible.

In each survey area, JFA identified the common automobile insurance companies and attempted to obtain three insurance price quotes for each type of car surveyed. These quotes were averaged by type of car to produce estimated insurance costs for each area.

JFA found that some insurance companies in Hawaii and Kauai Counties, Hawaii; Guam; Puerto Rico; and the Virgin Islands did not offer the coverages, limits, and deductibles shown above. To allow the comparison of the cost of these different policies with DC costs, OPM directed JFA also to survey in the DC area the cost of insurance that was comparable to that offered in these allowance areas. The cost of these equivalent policies were then compared to derive adjustment factors that could be applied to the cost of the standard coverages, limits, and deductibles shown above. By applying

these factors to the DC area average price, the cost of equivalent coverage was estimated for these particular allowance areas. The factors and their derivation are shown in Appendix 16.

5.2.10 Overall Annual Costs

As described above, JFA measured the annual costs for fuel, maintenance and oil, tires, licensing, taxes, depreciation, finance, and insurance for three types of automobiles in each allowance area and in the Washington, DC, area. These costs were then summed to determine the overall annual costs by area for owning and operating each type of automobile. Appendix 15 shows these costs for each area by type of vehicle.

5.3 Other Transportation Costs—Air Fares

Air fares are the only item priced for the Other Transportation Costs Category. For this item, JFA priced the lowest available round-trip air fare from each allowance area and the Washington, DC, area to Los Angeles, California. Los Angeles was selected because it is a common point approximately equidistant from most of the allowance areas and the Washington, DC, area. The cost of the trip from each allowance area to Los Angeles was compared with the cost of

the trip from the DC area to Los Angeles to compute the category indexes. These fares are shown in Appendix 17.

5.4 Transportation Component Analyses

JFA compared the total cost of private auto transportation for each vehicle in each allowance area with the total cost for the same vehicle in the DC area. These comparisons are expressed as indexes and are shown in Appendix 18. The indexes were then averaged to produce a single Automobile Expense Category index for each allowance area.

Likewise, JFA compared the cost of air fares for each area with those for the DC area and computed a cost index. These indexes are also shown in Appendix 18. That appendix also shows how the auto and air transportation indexes are combined using expenditure weights derived from the CES data to produce final transportation indexes.

JFA used national average expenditure data to derive weights that reflected how much consumers typically spend to own and operate an automobile versus other transportation expenses. These weights were used to combine the Automobile Expense Category index with the Other Transportation Cost index by area to derive the overall Transportation

Component index for the area. The weights, computations, and final indexes are also shown in Appendix 18. The Transportation Component indexes are used in Appendix 20 to derive the total overall index.

6. Miscellaneous Expenses

6.1 Component Overview

The Miscellaneous Expense component consists of three categories of expenses:

- Medical care,
- Contributions (including gifts to non-family members),
- Personal insurance and retirement contributions/ investments.

JFA used an approach similar to that used for the Goods and Services Component to derive the indexes for each of these categories and the Miscellaneous Component overall.

6.2 Component Weights

JFA used CES data to determine the appropriate weights for each of the items and categories in the Miscellaneous Component. The following table shows the category weights. Item weights are shown in Appendix 19.

TABLE 6-1.—MISCELLANEOUS EXPENSE CATEGORIES AND WEIGHTS

Categories	Income level		
	Lower (percent)	Middle (percent)	Upper (percent)
Medical Care	41.50	31.33	23.51
Contributions	15.80	16.85	17.65
Personal Insurance and Retirement Contributions	42.70	51.82	58.83
Totals	100.00	100.00	100.00

(Note: Values may not total because of rounding.)

6.3 Component Categories

6.3.1 Medical Expense Category

JFA surveyed the price of medical care items using essentially the same approach it used for the Goods and Services Component items. The following medical-care items were priced in each allowance area and in the Washington, DC, area. (See Appendix 5 for item descriptions).

- Nonprescription pain reliever
- Prescription drugs
- Vision check
- Dental service
- Doctor visit
- Hospital room
- Health insurance

JFA surveyed the cost of these items in both the allowance areas and in the

Washington, DC, area and compared the prices to produce an index for each item in each area. JFA combined these indexes using CES weights to produce a single Medical Care Category index for each area.

It should be noted that for the model, it is assumed that the cost of health insurance is constant among areas because the choice of Federal health coverage is to a large extent a matter of personal preference. Therefore, the index for this item is 100.00.

6.3.2 Contributions Category

The index for the Contributions Category is the Goods and Services Component index for the area. The Goods and Services index is used based on the assumption that the relative level

of contributions is roughly equivalent to that reflected by the Goods and Services index.

6.3.3 Personal Insurance and Retirement Category

The index for personal insurance and retirement contributions and investments is assumed to be constant among areas. The cost of Federal Employees Group Life Insurance is a matter of personal preference and is constant in all areas for the same age, salary, and benefit option combinations. Likewise, retirement contributions are a matter of personal preference and the minimum contribution requirements are constant among areas for equivalent salary levels.

6.4 Miscellaneous Expense Analyses

As with the Goods and Services Component, the indexes for each of the Miscellaneous Component categories are combined using CES weights to produce a single component index for each area. These indexes are shown in Appendix 19.

Section 2.5 describes how the miscellaneous expense component indexes are combined with the other component indexes to derive the final index for each area.

7. Final Results

7.1 Total Comparative Cost Indexes

The total comparative cost indexes appear below. Appendix 20 shows how each index was derived from the component indexes.

TABLE 7-1.—FINAL COST COMPARISON INDEXES

(7) Price Per Square Foot	
Transportation Component:	
Vehicles	1994 Honda Civic DX four door sedan, 1.5 Liter 4 Cylinder. 1994 Ford Taurus GL four door sedan, 3.0 Liter 6 Cylinder. 1994 Chevrolet S10 Blazer Two Door, four wheel drive, 4.3 Liter 6 Cylinder.
Base Price	Obtain the base price (Manufacturer's Suggested Retail Price) for each vehicle.
Options	For each vehicle, price the following options: air conditioning, AM/FM stereo radio, power steering, tinted glass, power disc brakes, rustproofing and other options.
Fees	For each vehicle, price the following options: destination charge, shipping charge, dealer markup, documentation fees and other one-time fees.
Taxes	For each vehicle, price the following taxes: excise tax, import/customs tax, use tax, sales tax and other one-time taxes.
Specifications	For each vehicle, obtain the following information: length, wheelbase, tires, curb weight, horsepower, fuel type and fuel performance (mpg).
Depreciation	For each vehicle, compute the residual value after 12, 24, 36 and 48 months respectively.
Gasoline	For each station name/brand, price regular unleaded self-service.
Tune-Up	For each vehicle, price a basic tune-up. Include parts and labor for the following: replace spark plugs, PCV valve, fuel filter, air filter, and breather filter. Check distributor cap, rotor, timing, and idle.
Oil Change	For each vehicle, price an oil change. Include parts and labor for the following: drain old oil, replace oil filter and refill with five quarts of 10W30 SG grade oil. If SG grade is unavailable, price SF grade oil.
Change Automatic Transmission Fluid.	For each vehicle, price to change automatic transmission fluid. Include parts and labor for the following: remove transmission pan, drain transmission fluid, replace transmission filter, replace transmission pan gasket, replace transmission fluid, and test vehicle.

APPENDIX 5.—ITEM DESCRIPTIONS—Continued

Coolant Flush and Fill	For each vehicle, price to flush and fill engine coolant. Include parts and labor for the following: remove old coolant, flush contaminants, and replace with new coolant.
Muffler System	For each vehicle, price a complete muffler system. Include parts and labor for the following: install all parts after the catalytic converter. These parts include mid pipes, clamps, muffler, and tail pipes.
Miscellaneous Tax	For each vehicle, price miscellaneous tax. Tell how rate is determined, give formula for new vehicle purchase, give formula for subsequent year (2 to 5) and explain billing.
Tires	Price a P175/70R13 for the Honda Civic. Price a P205/70R15 for the Ford Taurus L. Price a P235/R15 for the Chevrolet S10 Blazer in DC area.
License and Registration	For each vehicle, price title fee, passenger vehicle registration fees, plate fees, inspection fees, administration/clerical/other fees and local added fees. Specify if one-time or annual. List any exceptions if the Blazer is not registered as a passenger vehicle.
Automobile Finance	Obtain the rate for a four year loan based on a down payment of 20 percent. Assume the loan applicant is a current bank customer who will make payments by cash/check and not by automatic deduction from the account.
Automobile Insurance	For each vehicle, price insurance coverage identified below. Assume that vehicles are used in commuting 15 miles/day, 12,000 miles/year and that the driver is a 35-year-old married male with no accidents or violations in the last five years. When there is a geographic difference, obtain rates for two different living communities. Include related expense fees and taxes. Bodily Injury, \$100,000/\$300,000. Property Damage, \$25,000. Medical, \$15,000 or Personal Injury Protection, \$50,000. Uninsured Motorist, \$100/\$300,000. Comprehensive, \$100 Deductible. Collision, \$250 Deductible.
Round-Trip Airfare	Price for lowest cost round trip ticket to Los Angeles, CA. Disregard restrictions.

APPENDIX 6.—PRICING CHANGES

[Foods and Services/Miscellaneous Expenses/Housing Related]

Previous	Current	Reason
1. Cheddar Cheese: Per pound	10 oz. package	New packaging.
2. Donuts: 12 glazed	10 chocolate covered	Discontinued.
3. Appliance Repair: Price to replace oven thermostat control for <i>Maytag</i> Model #CRE9400. Include hourly rate, trip charge, and parts cost. Part Number #7430P010-60.	Price to replace digital clock and heating probe for <i>Maytag</i> Model #CRE9400ACL, Serial #1000100HB, Series #10. Include hourly rate, trip charge, and parts cost..	More comparable item.
4. Washing Machine: 3 wash cycles	8 wash cycles	Better description.
Maytag #LAT7793	Maytag #LAT9604	New model number.
General Electric #WWA7600R	General Electric #WWA8600	New model Number.
Whirlpool #LLR6233A	Whirlpool #LLR6233B	New model number.
5. Kitchen Range: General Electric #JBP5565	General Electric #JBP55GS	Model number clarification.
6. Refrigerator: Whirlpool #ET22RKXZ	Whirlpool #ET22RKXB	New model number.
7. Vacuum: Hoover #U4671-910	Hoover #U4671-930	New model number.
8. Girl's Jeans: Price of Levi's #902 basic relaxed taper jean, two back pockets and two front pockets.	Price of Levi's #550.	Discontinued.
9. Disposable Diapers: 44 count	40 count	Product marketing change.
10. Video Recorder: Zenith #VRL4110	Zenith #VRM4120	New model number.
Sony #SLV700HF	Sony #SLV720HF	New model number.
11. Compact Disc: "Janet" by Janet Jackson	"VS." by Pearl Jam	Current bestselling titles.
"Unplugged" by Rod Stewart	"Purple" by Stone Temple Pilots.	
12. Compact Disc Player: Sony #CDPC535	Sony #CDPC545	New model number.
Panasonic-Technics #SLPD847	Panasonic-Technics #SLPS867	New model number.
13. Color Television: Zenith #SLS2049	Zenith #SMS2049	New model number.
14. Bathroom Caulking:		

APPENDIX 6.—PRICING CHANGES—Continued
[Foods and Services/Miscellaneous Expenses/Housing Related]

Previous	Current	Reason
Price an 8 ounce tube of specific white bathroom caulking, most popular brand.	Price a 5.5 ounce plastic tube of latex white bathroom caulking. (<i>Not</i> a caulk gun cartridge.) Suggested brand: DAP KWIK SEAL Tub & Tile.	New Size and more description.
15. Interior Painting: Obtain labor rate, per hour, flat charge, if any, and estimated time to complete the job.	Flat charge for painting standard living room. If flat fee unavailable, obtain hourly rate and the total hours necessary to complete job.	More specific discription.

Appendix 7—Nonforeign Area Cost-of-Living Allowances Price Survey Data Collection Procedures

Survey Description

The following information will be provided to the participants verbally or in writing. Participants who are familiar with the program and the survey may be provided with less information as appropriate.

Purpose

The Federal Government pays cost-of-living allowances (COLA) in Alaska, Hawaii, and certain U.S. territories and possessions. Living cost differences are determined by comparing costs of goods, services, housing, transportation, and other items in the allowance area with the cost of the same or similar items and services in the Washington DC area. The U.S. Office of Personnel Management (OPM) is responsible for the operation of the COLA program.

Data Collection

OPM, or its representative, conducts annual Price Surveys to determine living cost differences. Local governments, retail outlets, realty firms, and businesses providing professional and other services to be surveyed are identified through the use of full-scale Background Surveys, conducted approximately once every five years. Participation in the Price Surveys is voluntary. Data are collected by telephone and/or personal interview.

Wherever practical and appropriate, the price of each good or service is obtained from at least three outlets in each allowance area and at least six outlets in the reference area (i.e., the Washington, DC, area). Realty data may be obtained from one or multiple sources, as appropriate.

Release of Information

The price data collected from participating firms may be made available to Congress or to the general public upon request. This includes the name of the company and prices of items or services surveyed. The names of proprietors, managers, or other individuals who provide price information generally will not be made public. However, the Government may release the names of individuals who, on the basis of their expertise, provide opinions or estimates.

Public Burden Information

Public burden reporting for this collection of information is estimated to vary from 1 to 20 minutes per response. Send comments

regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Reports and Forms Management Officer, U.S. Office of Personnel Management, 1900 E Street, NW., Room CHP 500, Washington, DC 20415; and to the Office of Management and Budget, Paperwork Reduction Project (3206-0199), Washington, DC 20503.

Nonforeign Area Cost-of-Living Allowances Price Survey Data Collection Procedures

Interview Guidelines

Three types of information are collected in Price surveys: Price of goods and services, rental rates and related information, and home prices and related information. The following are the typical interview questions used to collect these data.

Price Information Collection

1. What is the regular (non-sale) price of _____ (a specific item or service)?

Examples of items include, but are not limited to:

Chuck Roast, Bone In.

Price per pound. Average size package (e.g., not a "family" or "bonus" pack).

1st Choice: Arm pot roast.

2nd Choice: Eye roast.

Peas, Frozen.

Price for 10 ounce package.

1st Choice: Bird's Eye.

2nd Choice: Major brand of equivalent quality.

Men's Jeans.

Price for one pair of blue jeans.

1st Choice: Levi's #501 jeans.

2nd Choice: Equivalent quality jeans.

Automobile, New.

"Sticker" price of current year model Honda Civic DX, four door sedan, 1.5 liter, four cylinder engine. (Price options, fees, financing, and taxes separately.)

Example of services include, but are not limited to:

Woman's Haircut and Styling.

"Regular service" price for a woman's cut and style blow dry. Include wash, but do not include use of curling iron if there is an extra charge.

Unclog Drain.

Price to unclog kitchen drain by mechanical means (snake, auger, etc.).

Only include pipe removal of necessary to access trap.

Film Developing.

Price to process and print 35 millimeter, 24 exposure, 100 ASA color roll film. Single prints only, standard size and finish.

Doctor, Office Visit.

Typical fee, after the initial visit, for an office visit when medical advice or simple treatment is all that is needed. Do not include the charge for a complete physical examination, injections, medication, laboratory tests, or similar services.

Oil Change.

Price of a regular oil change including oil and filter for a current year model Honda Civic DX sedan, 1.5 liter, 4 cylinder engine.

2. Prices of many of the items can be obtained "off-the-shelf" without assistance. Occasionally, when a specific item is not available, assistance from sales or other personnel may be required to identify and price substitution items of comparable quality and quantity.

3. Prices of most services are obtained by telephone or personal interview. A few services are priced with little or no assistance. For example, prices may be obtainable from a displayed price schedule, list, or menu.

Housing Component—Rental Information Collection

1. Describe the location, size, layout, number and types of rooms, and square footage of your rental units.

2. Are they apartments, duplexes, town houses, detached houses, or other types of units? Describe.

3. Are there additional amenities (e.g., pool, sauna, tennis courts, gym)? If so, describe.

4. What is the monthly rent? What is the amount of the security deposit (if any)? What other kinds of fees or assessments are there?

5. Are utilities included? Which ones? If you can, please provide information on average monthly or annual costs of utilities paid by tenants.

6. Are term leases usually required? What are the conditions and penalties associated with the lease?

7. Are there any special restrictions or other factors we should know about (e.g., seasonal tourist trade)?

Housing Component—Information Collection for Comparable Sales

1. Describe the location, size, layout, number and types of rooms, and square footage of some your recent home sales.

2. Were they condominiums, duplexes, town houses, detached houses, or other types of dwellings? Describe.

3. Were there any atypical characteristics (e.g., extra large lot sizes, beach front, desirable/undesirable locations)?

4. Are there additional amenities provided by the developer, homeowners association, or similar community group (e.g., pool, sauna, tennis courts, gym)? If so, describe facilities and charges.

5. What was the selling price and date of sale?

6. What are the real estate taxes?

7. Do you have any data on utilities relating to these homes?

8. In the past year or so, what has been the average appreciation rate of property in this community? Looking back over the past six years, has this rate changed? How?

9. Describe current market conditions (e.g., soft, booming, so-so). How has this affected

housing prices? Describe the housing market over the past six years.

10. Are there any special considerations or other factors we should know about (e.g., retirement/tourist trade) that might affect the housing market in this community?

Nonforeign Area Cost-of-Living Allowances Background Survey Data Collection Procedures

Survey Description

The following information will be provided to the participants verbally or in writing. Participants who are familiar with the program and the survey may be provided with less information as appropriate.

Purpose

The Federal Government pays cost-of-living allowances (COLA) in Alaska, Hawaii, and certain U.S. territories and possessions. Living cost differences are determined by comparing costs of goods, services, housing, transportation, and other items in the allowance area with the cost of the same or similar items and services in the Washington, DC, area. The U.S. Office of Personnel Management (OPM) is responsible for the operation of the COLA program. OPM, or its representative, conducts annual surveys to determine living cost differences. OPM conducts full-scale Background Surveys approximately once every five years to review the appropriateness of items, services, and businesses covered in the annual Price Surveys. Elements of the Background Survey may be repeated annually on a limited basis as part of the maintenance of and preparation for the annual Price Surveys.

OPM uses the Background Survey to identify the services, items, quantities, outlets, and locations that will be surveyed to collect living cost data within the allowance areas and the Washington, DC, area. The Background Survey also is used to collect information on local trade practices, consumer buying patterns, taxes and fees, and other economic characteristics related to living costs.

Data Collection

Full-scale Background Surveys are conducted approximately once every five years. OPM identifies major manufacturers, local governments, retail outlets, realty firms, and businesses providing professional services to be surveyed on the basis of business volume and local prominence. Participation is voluntary. Data are collected by telephone and/or personal interview.

Confidentiality

All data collected are used only for the purposes described above. The Government pledges to hold all micro or "raw" data collected in confidence. Names of participating businesses and institutions may be released. Names of individuals are not released. Summary data will be made available to the public only to the extent that micro data cannot be associated with data sources.

Public Burden Information

Public burden reporting for this collection of information is estimated to vary from 5 minutes to 30 minutes per response. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Reports and Forms Management Officer, U.S. Office of Personnel Management, 1900 E Street, NW., Room CHP

500, Washington, DC, 20415; and to the Office of Management and Budget, Paperwork Reduction Project (3206-0199), Washington, DC, 20503.

Nonforeign Area Cost-of-Living Allowances Background Survey Data Collection Procedures

Interview Guidelines

Seven types of information are collected in background surveys. Information is collected on products and services, outlet availability and usage, transportation, local taxes and fees, mortgage, real estate, and other topics related to the measurement of living costs (e.g., specialized information from local chambers of commerce, colleges, and universities). The following are the typical interview questions used to collect these data.

Product or Service Information

1. As a major manufacturer/supplier of _____ (a specific product or service, e.g., women's apparel), please identify your items/services that are most popular (e.g., your 'volume sellers').
2. Which of these items are apt to be readily available in the following geographic locations: Alaska (i.e., Anchorage, Fairbanks, and Juneau); Hawaii, Guam; Puerto Rico; the Virgin Islands; and Washington, DC, and suburbs?
3. If the items or services are not universally available, are there other items or services that are of similar function, quality, quantity, size, and type and that can be substituted?
4. Is there anything else we should know about your product or service? Are there recommendations you wish to make that would help us in our data collection?

Outlet Availability and Usage (Retail)

1. What is your product or service? What is the address(es) of your establishment(s)? If you have multiple locations, which locations have the greatest sales volumes (i.e., are most utilized by consumers)?
2. What are your store/office hours? Do these vary by location?
3. Is your full line of products or services available at all locations?
4. Is there anything else we should know about your outlet(s) or recommendations you wish to make?

Transportation Information—Private and Public Services

1. What type of transportation services do you provide (e.g., taxi, bus, subway)?
2. What geographic areas do you service? Which routes are 'typical' or most heavily utilized?
3. What is your rate structure? Does it vary by time of day or season?
4. Is there anything else we should know about transportation usage and services in your area? Are there recommendations you wish to make about our data collection?

Transportation Information—Private Use and Maintenance

1. What types of driving are most common in your area? What is the annual distance driven?

2. What types roads and highways are common in your area? What are the road surfaces and conditions?

3. Are there unusual climatic or other factors that affect the fuel economy, maintenance, and depreciation of vehicles?

4. Is there anything else we should know about private transportation usage and maintenance in your area? Are there suggestions or recommendations you wish to make?

Local Taxes and Fees

1. What types of taxes, licenses, or fees does your State, territory, or local jurisdiction levy on real estate; personal property; sales (including sales of property); automobiles; utilities; or other goods, services, or transactions?
2. Who levies these taxes, licenses or fees (i.e., State, territory, county, city, other jurisdiction)?
3. What are the rates or schedules for these? How often and when are they levied? Do the rates/schedules vary by location, season, or other factors?
4. Is there anything else we should know about taxes and fees in your area? Are these suggestions or recommendations you wish to make?

Mortgage Information

1. What forms of home financing are most common in _____ (the allowance area or Washington DC metropolitan area)? (Do not include second mortgages.)
2. What are the typical conditions and limitations on loans?
3. What is the typical amount(s) of down payment required? What are the terms and rates?
4. Are there special subsidies or other practices that influence home financing in your area?
5. Looking back 6 years, what types of changes have occurred that affect home financing?
6. Is there anything else we should know about home financing in your area? Are there suggestions or recommendations you wish to make that would help us in our data collection?

Real Estate Information

1. What is the availability of housing in _____ (the allowance area or Washington DC metropolitan area)? Of principal interest is housing for typical salary and wage earners (as distinguished from retirees, tourists, or other special groups) for persons with low, moderate, and high incomes.
2. Describe the communities within your area in which persons _____ (specify occupation/income characteristics) typically live. If appropriate, identify separate communities for renters and home owners. Where are these communities located relative to the major Federal activities in the area?
3. Describe the type of housing (e.g., apartment, condominium, town house, detached house).
4. For each type of housing, what are the usual number of rooms, bedrooms, baths,

total square footage, lot size, type of construction, and similar characteristics?

5. What types of utilities are available and typically used in these communities: sewer, water, natural gas, electricity, other?

6. Are there any unusual factors that might affect maintenance requirements in your area?

7. Looking back six years, describe the changes that significantly affected the housing market (both rental and owner markets).

8. Is there anything else we should know about the housing market in your area? Are there suggestions or recommendations you wish to make concerning our data collection?

Other Types of Information

Occasionally, it is necessary to collect information from colleges, universities, chambers of commerce, trade associations, and other groups on specific subjects relating to the analysis of living costs. For example, a university known to be involved in home

energy research may be contacted to determine whether there are consumption data by region or allowance area that could have application in the COLA program.

When such data are collected, the purpose and basic structure of the interview will follow the patterns shown above. The substance, however, will vary with the subject matter.

Notes: Comparable BI/PD coverage was priced in the allowance and in the reference area, and premiums were compared to derive indexes. These indexes were used to estimate the cost of equivalent coverage in allowance area. Uninsured Motorist premiums were adjusted using the relative total cost of premiums (less Medical coverage where applicable), and Medical premiums were not adjusted because they were not part of the reference area normal coverage.

*Less Medical.

**Including Medical.

Notes: Comparable coverage was priced in the allowance and in the reference area, and the premiums were compared to derive indexes for each type of coverage. With two exceptions, these indexes were used to adjust reference area premiums by type of coverage to estimate the cost of equivalent coverage in allowance area. The exceptions are Uninsured Motorist premiums, which were adjusted using the relative total cost of premiums (less Medical coverage where applicable), and Medical premiums, which were not adjusted because they were not part of the reference to normal coverage.

*Less Medical
